Application No. 09/680,612   Attorney Docket No. P203/US
Paper filed June 22, 2006   Page 2 of 13
Reply to Panel Decision mailed March 27, 2006

Amendments to the Specification:

Please **REPLACE** the previously amended paragraph beginning at page 1, line 1, with the following amended paragraph:

The present invention is related to co-pending U.S. Patent Application Serial No. ~~10/658,999~~ <u>09/625,824</u> entitled "Automatically Configuring A Web-Enabled Digital Camera To Access The Internet," and to co-pending U.S. Patent Application Serial No. 09/626,418 entitled "Method and System for Selecting Actions To Be Taken By A Server When Uploading Images," which are assigned to the assignee of the present application, which are herein incorporated by reference.

Please **INSERT** the following new paragraph beginning at page 7, line 3:

Referring again to FIG. 1, each user account in the database 20 may also include one or more action lists, such as the action list 48 shown in FIG. 6. According to the present invention, an action list 48 includes one or more items representing actions that the gateway server 18 can take with respect to uploaded images, such as where to store and/or send the images from a particular user or camera, for instance. As explained further below, the action list 48 stored on the database 20 under a user's account can be downloaded to the user's camera 14 during a connection with the gateway server 18 and stored on the camera 14. When the user initiates an image upload, the action list 48 is displayed to the user so the user may easily select what actions the gateway server 18 should take with respect to the images by selecting the displayed action list items. In a preferred embodiment, the action list is created by the photo-sharing service 16 the first time the user's camera establishes a connection.
